

Command Center RX

View device status, toner levels, and paper availability at a glance through your web browser.

Take Command of Your Devices

Because MFPs are vital to your day-to-day organizational operation, you always want to be in the know as to the status and current capability of your devices. With Kyocera's Command Center RX, standard on all TASKalfa MFPs, you can. Command Center RX is a web-based interface that enables users to view toner levels, paper availability and device status by simply entering the devices' IP address into their web browser.

More detailed information as well as the ability to edit and update device settings is available to authenticated administrators once they log in. Administrators can add new folders to the MFP's document box as well as view, move, print, delete or send individual documents to a destination in the address book, email, or a shared folder. Through this interface, administrators can build an address book of most commonly used email contacts that is accessible from the touch screen control panel - for quick and error-free scan and send. You even have the ability to download print drivers directly from Command Center RX.

Command Center RX puts you in command of your Kyocera MFPs.

- Provides information on device status, toner levels, paper availability and more to all users
- Authentication to prevent unauthorized users from changing MFP settings
- Gives administrators access to device settings including address book, document box, device drivers and more
