

EFI PrintMe

Increase your workplace productivity with this Direct Mobile Printing application.

EFI™ PrintMe®

The EFI direct mobile printing feature of a Kyocera Fiery device allows users with a wireless connection to print directly from Apple mobile devices running iOS version 4.2 or later, including iPhones, iPads and the iPod touch. The direct mobile printing is a standard feature on the Kyocera Fiery Printing Systems.

With Fiery direct mobile printing, Apple mobile device users can print wirelessly using the native iOS print function. Users do not have to install printer drivers or find network printers. Mobile users select a printer and simply touch "Print."

The Direct Mobile Printing solution brings mobile devices into the workplace to increase productivity potential.

- Employees working on another floor or in another building on campus can easily print wherever they are.
- Traveling employees visiting another company site can print without finding network printers and loading printer drivers, and without any IT assistance.
- Remote employees, such as sales people, can quickly print when at any office.
- Visitors or contract workers can print using guest networks.
