

## RightFax Connector

Consolidate all your fax functionality to your MFP touch screen control panel.

### Fax the Right Way

When you think about efficient document workflow – print, copy and scan come to mind, but what about fax? Automating your fax communications will help you get the most out of your current Kyocera technology while controlling costs and reducing risks typically associated with manual processes.

With RightFax, organizations will be able to consolidate all faxing services on the network, giving users convenient access to faxing capabilities on the same devices used daily for printing, scanning and copying. As a result, businesses that use RightFax can reduce operating costs, while also improving their ability to meet security and compliance requirements.

Kyocera's RightFax Connector allows users to send faxes through an OpenText® Fax Server (RightFax) directly from the operation panel of a HyPAS-enabled Kyocera MFP. Using the touch panel of the MFP, users can access advanced RightFax features such as phone books, billing codes, cover pages, secure docs and certified delivery. The connector offers IT administrators several deployment options for setting up MFPs on the network to work seamlessly with existing RightFax servers.

- Interactive, easy to navigate user interface
- Send documents to RightFax server from a HyPAS-enabled device
- Walk-up fax capability directly at the MFP control panel
- Authenticated fax capability for accessing your personal phone book
- User address book accessibility for faxing to multiple destinations with ease
- Store a user-specific cover page for an added professional touch
- Available on all HyPAS-enabled Kyocera MFPs
